- Detailed instructions and specification on cleaning and application to best maintain your equipment
- A national service network and service manuals for our extensive product offering.

CANTILEVER TRAY & RACK DISPENSERS

APPLICATION

The cantilever self-leveling tray and rack dispenser is a convenient way to transport trays to the tray make up area and its ergonomic design reduces the need for bending and stretching to different heights.

CONSTRUCTION

The cantilever tray dispensers are stainless steel and allow for trays to be dispensed on a spring-loaded, self leveling mechanism. The carriages are cantilevered to an upright support where 14-gauge stainless steel arms hold the trays. The arms are connected to a bank of springs, located inside the upright supports, which can be hooked and unhooked for proper ergonomic dispensing level. The carriage platform is constructed of 18-gauge stainless steel with 20-gauge upright supports and top. The base is constructed of 18-gauge stainless steel and is fitted with vinyl corner bumpers. The dispenser rests on 5" diameter casters, two with locking brakes. Unit is NSF listed.
